SHINE & SLEEK

KERATIN SYSTEMS

APPLICATION

For Wavy & Unruly Hair

STEP 1 (PURIFICATION)

Wash your hair twice using Clarifying Shampoo. Apply on wet hair, massaging for 1 minute. In second washing, keep shampoo on your hair for 5 minutes in the end of which rinse your hair with plenty of warm water. Then towel dry your hair. *Now your hair is deeply cleaned and free of any product residues, your hair cuticles are open, and your hair is ready for Kera-Force treatment.

STEP 2 (APPLICATION)

Put Kera-Force in a non-metallic bowl. Split your wet hair into 4 equal bundles. Using a brush, apply adequate amount of product on thin wisp of hair starting from nape. With the aid of brush, ensure thorough absorption by wisp of hair. Apply equally throughout the hair, and then comb out any excessive amounts. * When spreading product on your hair, avoid applying excessive amounts and just apply up to saturation of your hair. During application, comb continuously using a fine-tooth comb.

STEP 3 (EXPOSURE TIME)

After application, keep Kera-Force on hair 45 minutes to 90 minutes. Determine waiting period according to hair type (thin strand /thick strand/curly/wavy) and according to desired final result. You can wait up to 90 minutes. in case of very hard, rebellious and resistant hair. *During initial 15 minutes of waiting period, heat hair using Climazon Dryer. If there is no Climazon dryer in the salon, then apply heat using blow dryer (During waiting period, avoid cold environments in particular. Product's effect during waiting period will decrease as the body heat reduces)

STEP 4 (RINSING)

Remove residual product off your hair through light emulsion of hair using warm water. Water which you squeeze out of your hair should be whitish. (Emulsion means semi-rinsing of hair first by wetting hair slightly and then leaking out residual product by massaging hair.)

STEP 5 (DRYING)

Dry hair completely and apply a straight layer of blow-dry.

STEP 6 (PRESS)

Set hair tong between 180 to 190 degrees minimum and 230 degrees maximum, taking into account hair type. Split hair into thin wisps of 5cm maximum, and press. Press each split wisp 8 to 10 times. Heat of hair tong should not decrease but remain stable during treatment. If heat of hair tong decreases, process cannot be fully achieved. You may make available a second heated hair tong, and use the second one as the first one whose heat has decreased is being heated. * The product is heat resistant, and it is activated by heat. The treatment is performed with heat.

STEP 7 POST-TREATMENT

Never put your hair behind your ears, never tie your hair up, or never wear hair pins after treatment. Keep your hair unwashed in that condition for 48 hours. In the end of 48 hours, press your hair again using hair tongs heated to 230 degrees. Wash your hair 24 hours later. After treatment, hair should be washed using Smooth Shampoo and conditioned using Smooth Conditioner. This will ensure a more durable straightening for your hair. * In the post-treatment waiting period, hair may look oily and heavy. Waiting period is very important for obtaining good results from hair straightening treatment.

HYDRATING SYSTEMS

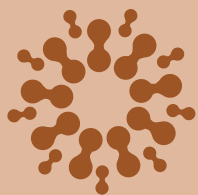

For Dry & Frizzy Hair

Ceylinn Hydrating Systems
